ABOUT ME

I am a full stack developer and Computer Science student, I bring a blend of of academic rigor and practical expertise to every project I undertake. Proficient in JavaScript/ TypeScript, React, and a variety of other programming languages and frameworks, I am adept at crafting dynamic and intuitive web applications. I have the ability to swiftly adapt to new challenges and technologies. My passion for software development is matched by my commitment to continuous learning.

WORK EXPERIENCE

[01/07/2023 – 31/08/2023]

Full Stack Web Developer (On site professional internship)

FreeBalance

Developed three full stack projects using React, TypeScript, Bootstrap, and Axios for front-end development and Java Spring Boot to build RESTful APIs. I created a recruitment portal allowing users to view and apply for available positions, built an attendance app enabling workers to log their shifts and store relevant information in the database and designed a complex workflow management interface allowing users to manage workflows and implemented data visualization libraries for enhanced user experience and workflow representation.

DIGITAL SKILLS

Languages

JavaScript | TypeScript | HTML | CSS | Java | Some PHP and Laravel

Frameworks, Libraries and Databases

React | Next.js | Node.js | Express.js | Spring (Spring Boot) | SASS | Bootstrap | Tailwind CSS | Prisma | Socket.IO | SQL | MongoDB

Others

Git | Postman | Linux

EDUCATION AND TRAINING

[Current]

Bachelor's Degree in Computer Science

University of Madeira

Full Stack JavaScript Curriculum

The Odin Project

PROJECTS

Personal projects

I have developed many personal projects which can be found in my github but some notable ones are full stack "clones" for both twitter and facebook. These projects include the main functionalities of each website including authentication, creating posts, interaction between users, profile editing, file uploading, etc. For the twitter clone I used Next.js, NextAuth.js, Prisma, Tailwind CSS, tRPC and MySQL and for the facebook clone I used the MERN stack (MongoDB, Express.js, React, Node.js) and also TypeScript and Tailwind CSS.
